

Amendments to the Specification:

Please amend the Specification as follow:

Please amend the paragraph beginning on page 6 at line 17 as follow:

- -As both the guide plate feed function and the constant flow function regulate the speed of the hydraulic motor 2, it is important that the two functions are not allowed to interfere with one another. This risk is eliminated by the control being coordinated by the same valve slide or at least the same valve slide movement controlling both the functions depending on the actuation/regulation of the flow control valve 7 as shown by the embodiments according to figs 1-6. In the embodiment according to figs 1-3, the flow control valve 6 7 and the actuator valve 41 have separate valve bodies, for example slides, which are mechanically connected, rigidly connected in the example, for example by a rod 48, so that they perform the same movement.- -
